

# Daemon Handler Server Process

6 - monitoring parent process

5 - not really needed, but it is for better readability

4 - process commands (business logic)

3 - write (communicator)

2 - read (communicator)

1 - creates and runs DaemonHadler\_Server

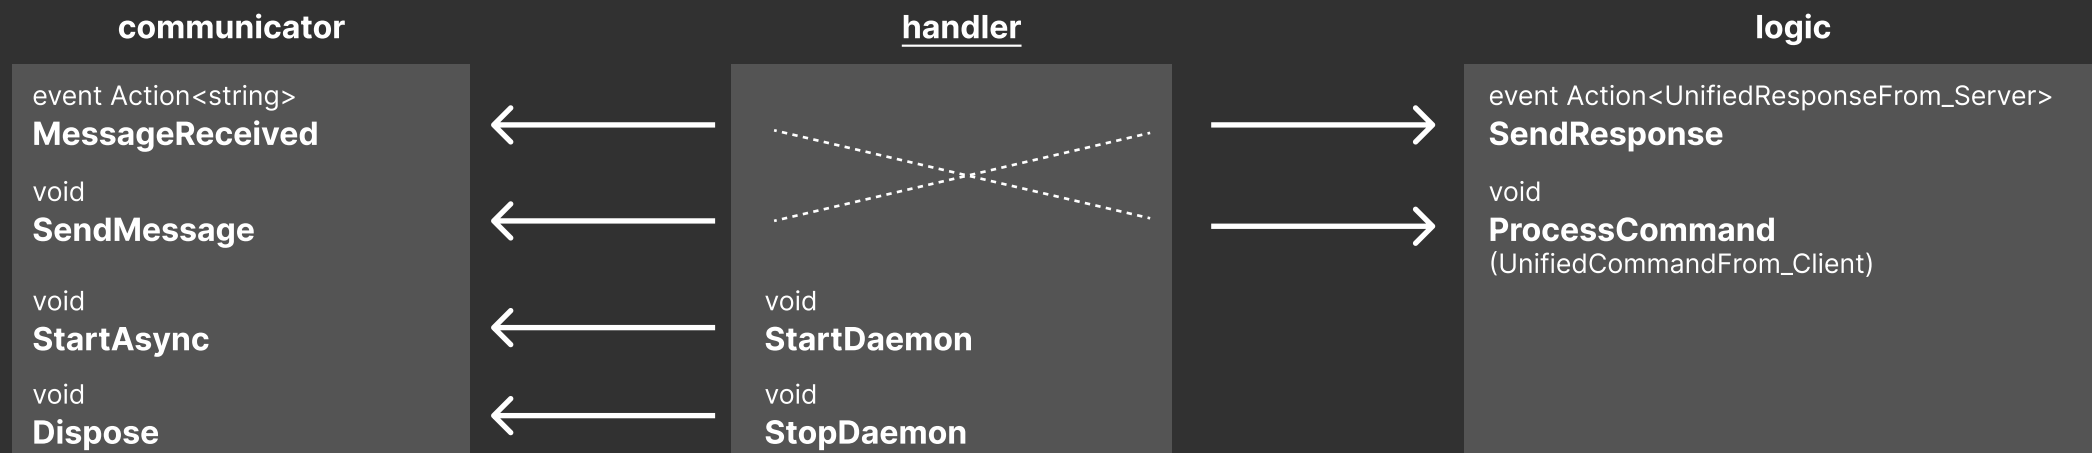

pink - thread is blocked

yellow - async

blue - some method is called now

red - parent process died / termination command

orange - handler  
green - communicator  
grey - program

# Handler is the main

# Server's business logic knows nothing about Handler nor Communicator

# Communicator knows nothing about Handler nor Business Logic
